

MultiDock™

*The compact, flexible way to charge
and store multiple iPads*

Your deployment of iPads, iPods or iPhones represents a substantial investment. But have you considered the ongoing investment of time and resources? Keeping your iOS devices charged, synced and secured can quickly become a costly logistical challenge.

To best manage your enterprise, you need a simple, scalable solution that gives you an intuitive end-user experience while maintaining tight controls over the content used on your mobile computing platforms.

This is MultiDock, the modular charge/sync/security solution that's easy to use and easy to scale.

Easy to use

SECURE, CHARGE & SYNC WHERE YOUR USERS ARE.

MultiDock delivers plug-and-charge convenience in a compact footprint that adapts easily to classrooms, open-plan offices and other settings.

SET-UP IS FAMILIAR.

You use iTunes' familiar interface to sync content on your iOS devices.

By default, MultiDock charges your iPad, iPhone or iPod. Connect the included host cable to your Mac when you want to sync or download content. Disconnect the host cable when you're done.

Physically separating the two operations ensures you maintain control over the content that moves onto your devices without sacrificing ease of use when charging.

SECURE CHARGING & SYNCING WHERE YOU NEED IT.

Add the available Mounting Base and Bay Lock to your MultiDock to create a completely secure charging station at a workstation, on a rolling AV cart or just about anywhere else.

SLIDE, CONNECT & CHARGE

Super-easy for your end users. Slide your iPad, iPhone or iPod into one of MultiDock's bays. Connect the included USB-to-Dock Cable. *That's it.* Easy-to-read LEDs signal when charging is complete. No need to remove your devices from their cases. MultiDock's bays are sized to accommodate most Griffin shell and skin-type cases.

Easy to scale

Mobile computing is changing the way institutions, businesses and agencies distribute, gather and use information. As your iOS deployment grows, your charge/sync capacity can as well. MultiDock is a modular platform, so you add capacity where and when you need it.

Why purchase charge/sync capacity for 30 iPads when you only have 20 iPads in use? MultiDock is available in 3 base configurations that make it easy to purchase the capacity you need, when you need it. It's easy to add MultiDock units as you go.

And only MultiDock allows you to charge any combination of iPads, iPhones and iPods in the same unit.

10-Bay MultiDock

Grounded Power Cord
